

The Big Bang!

Griffin

Once there was no Earth at all. There were humongous bubbles in space. There were only a few stars.

There there was the Big Bang! Then stars were born time after time.

Very few bubbles remained. Almost all the giant bubbles exploded at once.

Then some of the bubbles popped and there were not too many left. It was very noise in there.

The Earth was not too big at this time. After the Big Bang! happend there were not a lot of bubbles left.

Then millions of years later the Dinosaurs came alive. The Earth grew really big.
